This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polyA tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accurately this particular cDNA clone. However, there artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcription of unspliced precursor RNAs, and reverse transcription about this sequence, including its location and relationship to other sequences, please visit our Web site (http://fruitfly.berkeley.edu) or send email to

This CDS clone is a part of a collection of human full length repression clones generated by BD Biosciences Clontech and the Harvard Institute of Proteomics. Each CDS has been cloned in two forms: with and without stop-codon (to allow fusion with C-terminal tag). The CDS has been directionally cloned using BD In-Fusion (TM) cloning system between the Sall and HindIII sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site and before 'ATG' to provide Kozak consensus sequence; 'GG' after last codon and before HindIII site to maintain reading frame.

Clone distribution: http://bioinfo.clontech.com/orfclones.

Lag). The CDS has been directionally cloned using BD in-Fusion (TW)

cloning system between the Sall and Hindli sites of the pDNR-DUAL vector. Additional sequences in the clone: 'ACC' after Sall site

and before 'ATG' to provide Kozak consensus sequence,' GG' after

last codon and before Hindli site to maintain reading frame.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                  RESULT
                                                                                                                                                                ò
                                                                                                                                          The invention relates to an isolated polynuclectide (I) comprising one of 245 sequences (ABQ93288-ABQ93532). Treating a condition comprising administering to a mammalian subject a composition comprising the protein (II) encoded by (I) (ABP62809-ABP63053) or an antibody (III) to (II).

(I) and (III) are useful for diagnostic evaluation of disorders.
(I) is useful for gene therapy of diseases and (II) can be used for therapeutic treatment. Diseases that may be treated include wound healing and tissue repair, burns, central nervous system disorders (e.g. Alzheimer's, Parkinson's, Huntington's and amylotrophic lateral sclerosis, immune deficiencies, cancer, autoimmune disorders, multiple sclerosis, diabetes and allergies. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

Rosen CA, Barash SC, Ruben SM,

WPI; 2001-465460/50. P-PSDB; AAU17136.

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune disorders and neuronal disorders.

Claim 1; SEQ ID NO 88; 880pp; English.

The invention relates to novel isolated polypeptides (1), and

C polynucleotides (II). (II) and the antibody to (I) are useful for

C polynucleotides (II). (II) and the antibody to (I) are useful for

C diagnosing, preventing and treating diseases including immune system

C disorders (e.g. congenital and acquired immunodeficiencies, autoimmune

CC disorders (e.g. rheumatoid arthritis), inflammatory conditions, organ

C transplant rejections and graft versus host disease, infectious diseases

CC (e.g. hepatitis C), bleeding disorders, haemoglobin abnormalities and

C other blood-related disorders (sickle cell anaemia), myeloproliferative

C disorders, primary haematopoletic disorders, hyperproliferative disorders

C daucher's disease, Parkinson's disease), chromosomal abnormalities

CC Alzheimer's disease, Parkinson's Gisease), chromosomal abnormalities

CC Alzheimer's disease, parkinson's disease), chromosomal disorders (e.g. arrhythmia),

C respiratory disorders, dermatological disorders (e.g. Ardison's

C golumentory disorders, dermatological disorders (e.g. Addison's

C disease), reproductive system disorders (cirrhosis), as stimulators of

C inflammatory disorders, liver disorders (cirrhosis), as stimulators of

C higher affinity antibodies, and as a means to induce tumour pathologies e.g. acquired immune deficiency syndrome (AIDS). AASZ6976
C AASZ7850 represent novel signal transduction pathway protein coding

acid encoding the polypeptide is useful for preventing, treating, or ameliorating a medical condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosting a pathological condition or a susceptibility to presence or absence of a mutation in The nucleic acid, and diagnosing a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition based on the presence or absence of the mutation. The polypeptide, the nucleic acid and an antibody to the polypeptide are useful for treating autoimmune disease, Parkinson's disease, silicosis, gastrointestinal disease, atherosclerosis, haemophilia, thrombocytopenia. The polypeptide, the nucleic acid and the antibody are useful as immunosuppressive agents, as adjuvants to enhance immune responses, and as agents to induce higher affinity antibodies and increase serum immunoglobulin concentrations. The sequence data for this patent did not form part of the printed specification but was obtained in electronic format direct from USPTO at sequence uspto.gov/sequence.thml?DocID=20020168711.

Ye J, Di Francesco V, Beasley EM; Gan W,

WPI; 2003-018913/01 P-PSDB; AAE29096. New isolated human Ras-like protein polypeptide, useful for diagnosing, treating or preventing inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS, cancer, allergies, anemia, asthma or stroke.

Claim 4; Page 73-74; 82pp; English.

440

The invention relates to human Ras-like protein and its corresponding nucleic acid. The Ras-like protein and DNA is useful in the development of human therapeutics and diagnostic compositions. They are useful in the diagnosis, prevention and treatment of inflammation and disorders associated with cell proliferation and apoptosis, e.g. AIDS and other infectious or genetic immunodeficiencies, neurodegenerative disease e.g. Alzheinmer's disease, Parkinson's disease, wasting disease e.g. cachaxia, ischaemic injury, toxin-induced diseases such as alcohol-induced liver damage or injury, toxin-induced diseases such as alcohol-induced liver damage or cirrhosis, osteoporosis or ancer. They are also used to treat disorders associated with inflammation including allergies, atopic dermatitis, atherosclerosis, asthma, anaemia, Crohn's disease, diabetes mellitus, Grave's disease, glomerulonephritis, gout, irritable bowel syndrome, untoinmune thyroiditis, rheumatoid arthritis, sjogren's syndrome, autoimmune thyroiditis, rheumatoid arthritis, sjogren's syndrome, uveitis, trauma, or viral, bacterial, fungal, parasitic, protozoal or helminthic infections. The antibodies of the invention are useful in

us-09-817-198c-2.rng

```
180
pharmacogenomic analysis or for tissue typing. The transgenic animals are useful for studying the function of a Ras-like protein, and identifying and evaluating modulators of its activity. Ras-like protein is used in drug screening assays and its DNA is used in gene therapy. The present sequence is human Ras-like protein encoding cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 140
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         181 ArgMetArgAlaSerAsnGluLeuAlaLeuAlaGluLeuGluGluGluGluGlUGlyLysPro 200

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
ce which represent the human ORFX open reading frames 1 to 3161. The ORFX
antiposniatic; antiparkinsonian; nootropic; hepatotropic; vulnerary;
antiposniatic; antiparkinsonian; nootropic; neuroprotective; osteopathic;
anticonvulsant; antiarthriti; immunosuppressant; immunostimulant;
cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive;
dermatological; immunosuppressive; antiinflammatory; antibacterial;
antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The
sequences can be used for determining the presence of or predisposition
to, or preventing or treating pathological conditions associated with an
CORPX-associated disorder. The mucleic acids can be used to express ORPX
crosed to treat cancers; proliferative disorders, neurodegenerative
closed to treat cancers; proliferative disorders, neurodegenerative
closed to treat cancers; proliferative disorders, cardiovascular disease,
cliabetes mellitus, hypertension, hypothyroidism, cholesterol ester
storage, systemic lupus erythematosus, severe combined immunodeficiency
(SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune
contribage damage, noctural hemoglobinizia, antiinflammatory disease; to vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunostipus dermalological; immunosuppressare; antidiabetic; hypotensive; dermatological; immunosuppressave; antidiabetic; antidiabetic; antianaemic; gene therapy; cancer; proliferative disorder; hypotension; antianaemic; gene therapy; cancer; proliferative disorder; hypotension; neurodegenerative disorder; proliferative disorder; proliferative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholseterol ester storage; systemic lupus erythematosus; infection; severe combined immunoeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antinflammatory disease; coagulation; × enhance coagulation; to inhibit thrombosis; and as a contraceptive 461 G; 341 T; 0 U; 2 Other; Novel nucleic acids and peptides derived from open reading useful for treating e.g. cancers, proliferative disorders, neurodegenerative disorders and cardiovascular disease. 1666 212 0 0 0 6 Matches: Conservative: Mismatches: Indels: Length: 5; Page 1978-1979; 5507pp; English. Rosen CA, Barash SC, Ruben SM;

Novel polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to the proteins, including cancers, immune WPI; 2001-465460/50. P-PSDB; AAU17555.

The invention relates to novel isolated polypeptides (I), and the antibody to (I) are useful for diagnostiay, preventing and treating diseases including immune system disorders (e.g. congenital and acquired immunodeficiencies, autoimmune disorders (e.g. congenital and acquired immunodeficiencies, autoimmune configurations and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, infectious diseases (e.g. transplant rejections and graft versus host disease, myeloproliferative diseases, chimary haematopoletic disorders, hyperproliferative disorders (e.g. Gaucher's disease, Parkinson's disease), chromosomal abnormalities (c.g. Gaucher's disease, Parkinson's disease), chromosomal abnormalities (Dom syndrome), ischaemic injury (e.g. stroke), renal disorders (e.g. arrythmia), respiratory disorders, dermatological disorders (e.g. arrythmia), respiratory disorders, dermatological disorders (e.g. Addison's epithelial cell proliferation, endocrine disorders (e.g. Addison's chisease), reproductive system disorders (cirrhosis), as stimulators of lingammatory disorders), liver disorders (cirrhosis), as stimulators of thigher affinity antibodies, and as a means to induce tumour proliferation in pathologies e.g. acquired immune deficiency syndrome (AIDS), AAS26976-Sequences and PCR primers of the invention pathway protein coding Claim 1; SEQ ID NO 507; 880pp; English. disorders and neuronal disorders.

```
The invention relates to an isolated polypeptide. The polypeptide is useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject, by determining the presence or amount of expression of the polypeptide in a biological sample and diagnosing a pathological condition or a susceptibility to a pathological condition based on the presence or amount of expression of the polypeptide is also useful for identifying a binding patrner to the polypeptide is also useful for identifying a binding patrner and determining whether the binding patrner effects an activity of the polypeptide. The polypeptide or the nucleic acid encoding the polypeptide is useful for preventing the polypeptide or the nucleic acid encoding the polypeptide. The polypeptide or the nucleic acid condition, which involves administering the polypeptide or the nucleic acid to a mammalian subject. The nucleic acid is useful for diagnosing a pathological condition or a susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility to a pathological condition or susceptibility and useful acid and the antibody to the polypeptide are useful for induce induce immune responses, and as agents to induce data for this patent did not form part of the polypeptides and increase serum immunosuppressive agents from USPTO at pathological condition or susceptibility to the polypeptide or specificat
                                                                                                                                                                                                                                                                                                                        New isolated polypeptide useful for diagnosing and treating immunosuppressive conditions such as autoimmune disease and Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 566 BP; 140 A; 145 C; 172 G; 103 T; 0 U; 6 Other;

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABIJ6176-ABI30511), expressed DNA ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      detection reagent for detecting 1000 or more for elucidating cell signaling and cell-cell

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABB10981-ABB12330 represent nucleic caids encoding them. The invention also relates to vectors and recombinant host calls comprising a nucleotide of the invention, methods of detecting the nucleotides or antibodes against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of detecting the nucleotides or polypeptides for the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence collypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence contains activities, including cytokine, cell proliferation or cell financed activities, activity; have various activities; stem cell growth factor activity; have various activities; activities, membroodiatory activity; tissue growth activity; have various activities, activities, probable biological activities, or may be mematopolesis regulatory activity; tissue growth activities; cremanded activities; chemocatic or chemokinetic activities; polypeptides of morpored activities, activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, hammacoy conditions (e.g., polypeptides and nucleotides of proliferative retinopathy atherosclerosis, coronary heart disease, arterial ischaemia, bone disacrders (e.g., mayeloid or lymphoid cell cuscular growth. Polypeptides involved with tissue regeneration and repair of nucleic acids encoding them) may be used to promote wound repair growth. Polypeptides involved with tissue regeneration and repair of fungal infections in addition to immune disease or activity may be used to promote cell growth. For example, such polypeptides may be used to augment or replace cells deneced or activity may be used to succerning techniques. The disease or a
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human proteins and DNA encoding sequences useful for preventing, treating or ameliorating a medical condition in a mammalian subject e.g. arthritis

The invention relates to 2175 novel human ovarian antigens (ABP41054-CC ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also encompasses polypeptides 90% identical and polybrucleotides 95% identical to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigens and the use of recombinant vectors and host cells comprising human ovarian antigens and the use of vorarian antigens, and the use of ovarian antigens and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Succonditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system of isorders of ovarian or breast origin, reproductive system of isorders (e.g., infertility, disorders of pregnancy, anovulation.)

CC disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic disorders, infections (e.g., chlamydia, HIV, toxoplasmosis, and toxic shock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and vagnitis), immune disorders (e.g., cangenital and acquired conditions in disorders (e.g., anaemia), cardiovascular disorders (c.g., anaemia), cardiovascular disorders (e.g., anaemia), cardiovascular disorders (e.g., anaemia), cardiovascular disorders (c.g., anaemia), cardiovascular disorders (e.g., anaemia), cardiovascular disorders (c.g., anaemia), cardiovascu

Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AAB58106 - AAB58548. Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and immunomodulatory; muscular active general; vulnerary; gastrointestinal activity in ephrotropic; antiinfective; gynecological, or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
         identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as neutal, immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative disorders. The proteins may also be used in the treatment of wounds and infectious diseases. Polynucleotide sequences AAF18425 - AAF18433 and peptide AAB58549 are used in the course of the invention for the identification and characterisation of the polynucleotide and protein sequences

This invention describes a novel human Rablo cDNA sequence. The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polymucleotide and said polypeptide. This sequence encodes the human Rablo protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      377

The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence encodes a canine Rablo protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                   275 CAGATATGGGATACAGCAGGCCAGGAGCGATTTCACACCATCACAACCTCCTACTACAGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes a novel human Rablo cDNA sequence. The protein coded by said sequence belongs to Yap/Rab family and is the homolog of mouse Rablo. The present invention also relates to the polypeptide coded by said nucleotide sequence and the application and preparing process of said polynucleotide and said polypeptide. This sequence encodes the human Rablo protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ATGGCGAAGAAGACGTACGACCTTGCTTTTCAAGCTGCTCCTGATCGGGGATTCCGGAGTG 154

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        79
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ġ
                                                                                                                                                                        The present sequence encodes a mammalian RAB protein. RAB proteins constitute the largest family of small GTPases, with over 40 identified isoforms. RAB proteins contain four highly conserved peptide sequences involved in GTP binding and hydrolysis. Compositions comprising RAB nucleic acid are useful for identifying homologous or related genes, in producing compositions that modulate the expression or function of RAB, for gene therapy, mapping functional regions of the protein and in studying associated physiological pathways. In addition, modulation of the gene activity in vivo is used for prophylactic and therapeutic purposes, such as treatment of cancer, and identification of cell type based on expression. The DNA may also be used to identify expression of the gene in a biological specimen
   Novel isolated nucleic acid encoding a mammalian RAB protein useful for identifying homologous or related genes, in producing composition that modulates expression or function of RAB for cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MetLysTrpValSerAspValAspGluTyrAlaProGluGlyValGlnLysIleLeuIle
